**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bowers (5,409,241) in view of Hawley (5,024,450).

Bowers discloses a seal assembly comprising a seal element 55 with an aperture secured on an external portion of a shaft. The assembly comprises a rotator cup 38 in an aperture of a body block 12. The rotator cup engages an external surface of the seal element and is compressed there against by a plate 50 or 31. The plate 31 is secured to the block and engages the rotator cup. A passageway 29 extends from an exterior portion of the block to provide flushing means to an area around the seal element. Bowers does not disclose securing means (i.e. lands and grooves) in the aperture of the seal element. Hawley teaches a seal assembly comprising a seal element secured to a shaft. Hawley teaches plural lands 31 and grooves 32 in the aperture to sealingly engage the shaft and firmly retain the sealing element in place. It would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the seal element of Bowers with the lands and grooves taught by Hawley to ensure a fluid tight seal between the element and shaft.

Regarding claim 7, making the passageways (grooves) serpentine is considered a design choice. See *In re Dailey* 149 USPQ 47 (CCPA 1966). Therefore, it would have been obvious

Art Unit: 3676

for one of ordinary skill in the art at the time the invention was made to make the passageways serpentine as a matter of choice in design.

*Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. For example, Otto, Gilbert, or Cox, can also read on at least claim 1.
